

1. Document Control & Sources

This PRD was produced through a meta-prompting chain: meta-prompt-prd.md → prd-prompt.md → this document. Every factual claim below is attributed to one of the following sources; anything not yet verifiable is explicitly marked as an assumption, an open question, or a Phase 0 verification item.

- BigCapital repository page (github.com/bigcapitalhq/bigcapital), fetched 2026-07-07: AGPL-3.0 license; open-source double-entry accounting + inventory software with invoicing, payments, expenses, and bills; REST API (“headless accounting”); TypeScript monorepo (pnpm workspaces + lerna, packages/); Docker deployment; Playwright e2e; latest release v0.25.20 (2026-03-28).
- Estimation framework: the team's agile-estimation.md gist, retrieved verbatim in-session on 2026-07-07. Its own citations (Cohn, Grenning, DSDM, Wake, et al.) are inherited, not re-verified here.
- Stakeholder decisions (Arafat, 2026-07-07): single-agency deployment; Bangladesh regime (BDT base currency, NBR VAT); manual data entry this week plus typed stub adapter interfaces; Word-format PRD; MoSCoW decoupled from story points; one-week AI-agent delivery.

Claims about BigCapital internals (module names, extension points, existing reports) are deliberately NOT asserted in this document; each is tagged “verify in codebase (Phase 0)” on the story that needs it.

2. Executive Summary, Goals & Non-Goals

TravelBooks adapts, white-labels, and extends BigCapital into the back office of a single Bangladeshi travel agency selling flight tickets, hotel bookings, tour packages, transport, and amenities (visa processing, travel insurance). BigCapital supplies the double-entry ledger, invoicing, payables, and reporting core; this project adds the travel domain: passengers and passports, PNRs and fare breakdowns, markup-vs-commission economics, package bundling, supplier statement reconciliation, client advances held as liabilities, and product-line reporting — all under the agency's own brand.

2.1 Goals

- G1. A counter agent can take a customer from quotation to receipt in one system with no re-keying (E2).
- G2. Every ticket, room night, package, and amenity sold carries its travel metadata and posts to the correct account automatically (E1, E3–E6).
- G3. The accountant can reconcile every supplier statement to recorded tickets and trust the VAT and advance-liability positions (E7, E8, E0).
- G4. The product is fully agency-branded and AGPL-compliant (E0).
- G5. Future GDS/NDC and payment-gateway integrations plug into typed adapter seams without re-architecture (E9).

2.2 Non-Goals (this release)

- Live GDS/NDC/hotel-API/payment-gateway integrations; multi-tenant SaaS; customer-facing self-service portal; mobile apps; Bangla UI localization. See § 11 (Won't-Have) — several are expected fast-follows.

3. Personas & Roles

Persona	Description	Primary epics
Agency Owner	Runs the business; watches sales, margins, agent performance, and cash.	E8, E2, E10
Counter / Ticketing Agent	Front-line seller; quotes itineraries, issues tickets and vouchers, takes payments, handles cancellations.	E2–E6
Accountant	Owns the ledger; VAT, supplier payables, reconciliation, advances, aging.	E0, E7, E8
Admin	Configures branding, catalog, roles, adapters, backups; often the owner or a senior agent.	E0, E1, E9, E10

4. Assumptions & Constraints

- A1. Fork-based customization of the AGPL-3.0 codebase, keeping travel features in as-separable modules as the architecture allows (extension points verified in Phase 0) so upstream releases (v0.25.x line as of 2026-03-28) can still be merged.
- A2. AGPL-3.0 obligations for a network-served modified work are addressed by MB-004 (source-offer page); the precise legal reading, and any trademark constraints in the repo's LICENSE/DISCLAIMER files, are for counsel to confirm before launch — flagged, not assumed.
- A3. Single-tenant, single-agency deployment on the agency's Docker host; BigCapital's existing tenancy model is used as-is.
- A4. BDT is the base currency; NBR VAT applies; exact filing formats are an open question for the agency's accountant (MB-804).
- A5. All supplier data is manually keyed this week; adapter interfaces (E9) are seams, not integrations.
- A6. Delivery is by AI coding agents (Claude Code) working in parallel under human review; the one-week plan (§ 8) assumes multiple concurrent agents — this is the plan's biggest schedule assumption.

5. Estimation & Prioritization Method

5.1 Framework (adopted from the team gist)

- Story form “As a <role>, I want <goal>, so that <benefit>”, INVEST-checked; Given/When/Then acceptance criteria per story.
- Point scale 1/2/3/5/8 plus SPLIT (▲) for anything larger; round up when torn; nothing enters the plan above 8 points (Definition of Ready, § 8.3).
- Baseline anchor: MB-102 “Supplier registry & types” = 2 points — one entity, one simple screen, no new state machine. Every other size in this document was set relative to it.
- Value 1–5 per story, independent of points. All Value scores herein are provisional — PO to confirm (open question OQ-1).
- Estimation honesty: the gist prescribes two-estimator reveal (§ 1.5). These sizes are a single AI estimator's judgment, calibrated to the baseline and the gist's rubric — treat divergences the team finds as the signal the framework says they are, and re-pick.

5.2 Declared deviation: MoSCoW is not driven by Value ÷ Effort

Framework § 1.4 ranks by Value ÷ Effort and buckets into MoSCoW. This project deviates, per stakeholder decision (2026-07-07): delivery is by AI coding agents with the whole backlog targeted inside one week, so effort is not the scarce resource and V÷E would mis-rank go-live-critical stories. MoSCoW here is assigned by: (a) go-live criticality — could the agency operate Monday without it; (b) dependency order — what unblocks the critical path; (c) compliance necessity (AGPL, VAT, PII). V÷E is computed and shown per story, but only as a tie-breaker within a bucket and for the PO's sanity check. Points are retained for what they still do well: enforcing the split discipline (≤ 8), sizing the daily burn-up (§ 10), and calibrating real AI-agent throughput from Day 1.

5.3 Velocity hygiene (unchanged from the gist)

Points remain a forecasting gauge, not a performance target; no cross-team comparisons; no per-individual (or per-agent) estimation; no points→hours table. Day-1 actuals are a calibration datum, not a KPI.

6. Epics & User Stories

Notation per story: Points · Value (provisional) · V÷E (tie-breaker only, § 5.2) · MoSCoW · Day (§ 10) · Dependencies. Every story carries its own Definition of Ready (entry gate) and Given/When/Then acceptance criteria (exit test). Every epic closes with its own Definition of Done, which extends the shared engineering baseline in § 10.3. “Verify (Phase 0)” flags mark claims about existing BigCapital behavior that must be confirmed in the codebase — via the § 7 spikes — before the story is Ready.

E0 — Foundation & White-Label (7 stories, 15 pts)

Epic goal: Fork bootstrapped, agency identity applied everywhere, Bangladesh accounting baseline in place, AGPL obligations addressed.

MB-001 — Brand configuration

As an admin, I want to set the agency's name, logo, and brand colors in one configuration, so that the application shows our identity everywhere instead of Bigcapital's.

Points: 3 **Value:** 5 (provisional) **V÷E:** 1.67 **MoSCoW:** Must **Day:** 1 **Depends on:** —

Verify / flag: Theming/config extension points — verify in codebase (Phase 0).

Definition of Ready:

- No blocking dependencies.
- Phase 0 verification closed (see “Verify / flag” above).
- Agency brand assets received from the owner: logo files, color palette, legal entity name.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given brand settings are saved, When any page renders, Then the agency logo, name, and colors appear on login, navigation, and footer.
- Given no logo has been uploaded, When pages render, Then a neutral default is shown (never upstream Bigcapital branding).
- Given the DISCLAIMER/LICENSE trademark terms (checked in Phase 0), When the rebrand ships, Then no upstream marks remain in the UI.

MB-002 — Branded customer documents (invoice / quote / receipt PDFs)

As a counter agent, I want to issue quotes, invoices, and receipts on agency-branded PDF templates, so that customers receive professional documents under our brand.

Points: 3 **Value:** 5 (provisional) **V÷E:** 1.67 **MoSCoW:** Must **Day:** 1 **Depends on:** MB-001

Verify / flag: Existing PDF template pipeline — verify in codebase (Phase 0).

Definition of Ready:

- Dependencies completed: MB-001.
- Phase 0 verification closed (see “Verify / flag” above).
- Sample invoice/quote/receipt data seeded for template rendering checks.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a confirmed invoice, When its PDF is generated, Then it carries the agency letterhead, BDT amounts, and VAT lines.
- Given a quotation or receipt, When its PDF is generated, Then it uses the same branded template family.

MB-003 — Branded transactional emails

As an admin, I want to have all outgoing system emails use agency-branded templates, so that every customer touchpoint is consistent with our brand.

Points: 2 **Value:** 4 (provisional) **V÷E:** 2.00 **MoSCoW:** Should **Day:** 1 **Depends on:** MB-001

Verify / flag: Mail template mechanism — verify in codebase (Phase 0).

Definition of Ready:

- Dependencies completed: MB-001.
- Phase 0 verification closed (see “Verify / flag” above).
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given an invoice is emailed, When the customer receives it, Then sender name, logo, and footer are the agency's.
- Given any system notification email, When sent, Then no upstream branding appears.

MB-004 — AGPL source-offer page

As an admin, I want to publish a legal/about page that links to the modified source code, so that we operate the AGPL-3.0-licensed fork compliantly.

Points: 1 **Value:** 5 (provisional) **V÷E:** 5.00 **MoSCoW:** Must **Day:** 1 **Depends on:** —

Verify / flag: Exact obligations for network-served modified AGPL code — counsel to confirm wording.

Definition of Ready:

- No blocking dependencies.
- Phase 0 verification closed (see “Verify / flag” above).
- Counsel's source-offer wording requested (placeholder text acceptable to start; launch gates on OQ-5).
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given the app is served to users, When a user opens the Legal/About page, Then a working link to the modified source repository is present.
- Given a new release is deployed, When the page renders, Then the linked source matches the deployed version.

MB-005 — BDT base currency & formatting

As an accountant, I want to run the books in BDT with correct symbol and number formatting, so that all statements and documents are in our operating currency.

Points: 1 **Value:** 5 (provisional) **V÷E:** 5.00 **MoSCoW:** Must **Day:** 1 **Depends on:** —

Verify / flag: Existing multi-currency behavior (needed for USD supplier costs) — verify in codebase (Phase 0).

Definition of Ready:

- No blocking dependencies.
- Phase 0 verification closed (see “Verify / flag” above).
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given organization setup selects BDT, When any amount renders, Then BDT formatting is applied consistently.
- Given a foreign-currency supplier cost, When recorded, Then multi-currency conversion still functions.

MB-006 — VAT configuration (NBR regime)

As an accountant, I want to configure VAT rates per travel service type, so that invoices compute and post VAT correctly without code changes.

Points: 3 **Value:** 5 (provisional) **V÷E:** 1.67 **MoSCoW:** Must **Day:** 1 **Depends on:** MB-007

Verify / flag: Exact NBR filing formats — open question for the agency's accountant; do not hard-code.

Definition of Ready:

- Dependencies completed: MB-007.
- Phase 0 verification closed (see “Verify / flag” above).
- Current VAT rates per service type provided by the agency's accountant (OQ-2 opened; generic rates unblock the story).
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given VAT rates are configured per service type, When an invoice line is added, Then VAT is computed and posted to the VAT payable account.
- Given a rate change by the regulator, When admin edits the rate, Then new documents use it and old documents are unchanged.

MB-007 — Travel chart-of-accounts preset

As an accountant, I want to apply a travel-agency chart-of-accounts preset on setup, so that postings for the travel business land in the right accounts from day one.

Points: 2 **Value:** 5 (provisional) **V÷E:** 2.50 **MoSCoW:** Must **Day:** 1 **Depends on:** —

Verify / flag: Seed/import mechanism for accounts — verify in codebase (Phase 0).

Definition of Ready:

- No blocking dependencies.
- Phase 0 verification closed (see “Verify / flag” above).
- Draft account list reviewed with the agency's accountant.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a fresh organization, When the preset is applied, Then accounts exist for airline/consolidator payables, commission income, service-fee income, penalty income, client advances (liability), and VAT payable.
- Given the preset, When applied twice, Then it is idempotent.

Definition of Done — E0 (Foundation & White-Label):

- Visual sweep on a fresh install: zero upstream Bigcapital marks across UI pages, PDFs, and emails.
- End-to-end test posting: one invoice with VAT flows through the preset chart of accounts correctly.
- AGPL source-offer page live and pointing at the deployed revision; LICENSE/DISCLAIMER review notes filed for counsel (OQ-5).
- Shared engineering baseline (§ 10.3) green for every story in the epic.

E1 — Travel Master Data (4 stories, 13 pts)

Epic goal: Passengers, suppliers, and the travel service catalog exist as first-class records.

MB-101 — Passenger profiles

As a counter agent, I want to keep passenger profiles (passport number, expiry, date of birth, visa status) linked to customers, so that documents and bookings reuse verified passenger data.

Points: 3 **Value:** 5 (provisional) **V+E:** 1.67 **MoSCoW:** Must **Day:** 2 **Depends on:** MB-1003

Definition of Ready:

- Dependencies completed: MB-1003.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a customer, When a passenger profile is added, Then passport number and expiry are validated and an expiry inside the travel window raises a warning.
- Given a booking, When passengers are attached, Then their details flow to manifests and travel documents.

MB-102 — Supplier registry & types (BASELINE = 2 points)

As an accountant, I want to create, list, and edit suppliers typed as airline/consolidator, hotel, tour operator, transport, or insurer, with payable terms, so that supplier accounting and reporting can segment by supplier type.

Points: 2 **Value:** 4 (provisional) **V+E:** 2.00 **MoSCoW:** Must **Day:** 2 **Depends on:** —

Definition of Ready:

- No blocking dependencies.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given the supplier form, When a supplier is saved with a type and payment terms, Then it appears in the typed supplier list.
- Given an existing supplier, When edited, Then history of its bills is unaffected.

MB-103 — Travel service catalog

As an admin, I want to define sellable service types (flight, hotel night, tour package, transport, visa, insurance) each with its travel metadata schema and income account, so that every sale carries the right metadata and posts to the right product line.

Points: 5 **Value:** 5 (provisional) **V÷E:** 1.00 **MoSCoW:** Must **Day:** 2 **Depends on:** MB-007

Verify / flag: Item/inventory model reuse vs. new entity — verify in codebase (Phase 0).

Definition of Ready:

- Dependencies completed: MB-007.
- Phase 0 verification closed (see “Verify / flag” above).
- Product-line → income-account mapping agreed with the accountant.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given an invoice line of type “flight”, When it is added, Then flight metadata fields become available on that line.
- Given any service type, When sold, Then revenue posts to that type's mapped income account.
- Given a new amenity type, When admin defines it, Then no code change is required.

MB-104 — Corporate clients with credit terms

As an accountant, I want to manage corporate clients with credit limits and on-account invoicing, so that we can serve companies that settle monthly.

Points: 3 **Value:** 3 (provisional) **V÷E:** 1.00 **MoSCoW:** Should **Day:** 2 **Depends on:** MB-102

Definition of Ready:

- Dependencies completed: MB-102.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a corporate client with a credit limit, When a new invoice would exceed it, Then the agent sees a block or override-with-permission.
- Given month end, When a statement is generated, Then it lists all open invoices and payments for the client.

Definition of Done — E1 (Travel Master Data):

- All four record types (passenger, supplier, catalog item, corporate client) creatable and editable through the UI with role permissions enforced.
- A test sale of each catalog type posts to its own income account.
- Passport fields confirmed encrypted at rest and masked for unauthorized roles (integration test with MB-1003).
- Shared engineering baseline (§ 10.3) green for every story in the epic.

E2 — Booking Lifecycle (6 stories, 23 pts)

Epic goal: One uninterrupted flow: quotation → booking → invoice → payment → receipt, with deposits and cancellations handled.

MB-201 — Itinerary quotation

As a counter agent, I want to build a multi-line quotation mixing flights, hotels, tours, and transport with a validity date, so that customers get one priced itinerary quickly.

Points: 3 **Value:** 4 (provisional) **V÷E:** 1.33 **MoSCoW:** Must **Day:** 3 **Depends on:** MB-103

Verify / flag: Adapt existing estimates module — verify in codebase (Phase 0).

Definition of Ready:

- Dependencies completed: MB-103.
- Phase 0 verification closed (see “Verify / flag” above).
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a quotation, When lines from different service types are added, Then each line carries its own metadata and VAT.
- Given a validity date in the past, When the agent tries to convert it, Then the system requires re-validation.

MB-202 — Quote → booking → invoice conversion

As a counter agent, I want to convert an accepted quotation into a booking and then an invoice without re-keying, so that no double entry and no transcription errors.

Points: 5 **Value:** 5 (provisional) **V÷E:** 1.00 **MoSCoW:** Must **Day:** 3 **Depends on:** MB-201, MB-203

Definition of Ready:

- Dependencies completed: MB-201, MB-203.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given an accepted quotation, When converted, Then a booking is created with all lines, passengers, and prices carried over.

- Given a booking, When invoiced, Then the invoice references the booking and totals match to the poisha.

MB-203 — Booking entity & status flow

As a counter agent, I want to track each booking through pending → confirmed → ticketed/vouchered → completed → cancelled with travel dates, so that the whole agency sees the true state of every trip.

Points: 5 **Value:** 5 (provisional) **V÷E:** 1.00 **MoSCoW:** Must **Day:** 3 **Depends on:** MB-103

Definition of Ready:

- Dependencies completed: MB-103.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a booking, When its status changes, Then the transition is timestamped and attributed to a user.
- Given an illegal transition (e.g., completed → pending), When attempted, Then it is rejected.
- Given a date range, When bookings are listed, Then they can be filtered by status and travel date.

MB-204 — Deposits & partial payments

As a counter agent, I want to take deposits and partial payments against a booking invoice, so that customers can pay the Bangladeshi way — in installments.

Points: 3 **Value:** 5 (provisional) **V÷E:** 1.67 **MoSCoW:** Must **Day:** 3 **Depends on:** MB-007, MB-202

Definition of Ready:

- Dependencies completed: MB-007, MB-202.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given an invoice, When a partial receipt is recorded, Then the outstanding balance updates and shows on the booking.
- Given a deposit taken before ticketing, When posted, Then it credits the client-advance liability account, not revenue.

MB-205 — Cancellation with penalty & refund

As a counter agent, I want to cancel a booking applying supplier/agency penalties and issuing the refund, so that cancellations are handled consistently and profitably.

Points: 5 **Value:** 4 (provisional) **V÷E:** 0.80 **MoSCoW:** Must **Day:** 3 **Depends on:** MB-203, MB-204

Definition of Ready:

- Dependencies completed: MB-203, MB-204.

- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a cancellable booking, When cancelled with a penalty amount, Then penalty income posts and the refundable balance is computed.
- Given a refund due, When processed, Then a credit note and refund payment are generated and linked to the booking.

MB-206 — Daily counter summary

As an agency owner, I want to see each day's bookings, receipts, and pending payments per agent, so that the counter can be closed out and cash reconciled daily.

Points: 2 **Value:** 3 (provisional) **V÷E:** 1.50 **MoSCoW:** Should **Day:** 3 **Depends on:** MB-203, MB-204

Definition of Ready:

- Dependencies completed: MB-203, MB-204.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a business date, When the summary runs, Then bookings, receipts, and outstanding balances are grouped per agent.

Definition of Done — E2 (Booking Lifecycle):

- One e2e walkthrough — quote → booking → invoice → deposit → final receipt — passes with no re-keying and poisha-exact totals.
- A cancellation produces penalty income, credit note, and refund entries that reconcile in the ledger.
- Counter-agent UAT script drafted and dry-run.
- Shared engineering baseline (§ 10.3) green for every story in the epic.

E3 — Flight Ticketing (5 stories, 22 pts)

Epic goal: Tickets carry airline metadata, correct fare accounting, supplier costs, and reversible refund/void/reissue flows.

MB-301 — Flight line metadata

As a counter agent, I want to record PNR, ticket number, airline, sectors, travel dates, passenger, and class on each flight line, so that any ticket can be found by PNR or ticket number instantly.

Points: 3 **Value:** 5 (provisional) **V÷E:** 1.67 **MoSCoW:** Must **Day:** 4 **Depends on:** MB-103

Definition of Ready:

- Dependencies completed: MB-103.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a flight line, When saved, Then PNR and ticket number are stored and validated for format.
- Given a PNR or ticket number, When searched, Then the booking and invoice are found.

MB-302 — Fare breakdown & pricing

As a counter agent, I want to enter base fare, taxes, and fees separately, add our service fee, and see the margin against supplier cost before saving, so that pricing is transparent and mistakes are caught at entry.

Points: 5 **Value:** 5 (provisional) **V÷E:** 1.00 **MoSCoW:** Must **Day:** 4 **Depends on:** MB-301

Definition of Ready:

- Dependencies completed: MB-301.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a flight line, When base/taxes/fees and service fee are entered, Then the selling total and margin vs. supplier cost display before save.
- Given a negative margin, When saving, Then the agent gets a warning requiring confirmation.

MB-303 — Supplier cost & payable per ticket

As an accountant, I want to record the consolidator/airline cost at ticketing so a supplier payable is raised per ticket, so that payables always match tickets issued.

Points: 3 **Value:** 5 (provisional) **V÷E:** 1.67 **MoSCoW:** Must **Day:** 4 **Depends on:** MB-102, MB-301

Definition of Ready:

- Dependencies completed: MB-102, MB-301.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a ticketed flight line with a supplier cost, When saved, Then a supplier bill line is created for the right supplier.
- Given a ticket, When viewed, Then its selling price, cost, and margin are visible to authorized roles.

MB-304 — Void / refund / reissue accounting

As a counter agent, I want to void, refund, or reissue a ticket with all accounting entries reversed or adjusted correctly, so that the books stay correct through every airline-side change.

Points: 8 **Value:** 4 (provisional) **V÷E:** 0.50 **MoSCoW:** Must **Day:** 4 **Depends on:** MB-302, MB-303

Verify / flag: Largest story on the board — if Day-1 calibration undershoots, split into void / refund / reissue before Day 4 (framework SPLIT rule).

Definition of Ready:

- Dependencies completed: MB-302, MB-303.
- Phase 0 verification closed (see “Verify / flag” above).
- Airline/consolidator penalty examples collected for test cases.
- Split decision taken per § 10.1 if Day-1 calibration undershot.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a same-day void, When processed, Then revenue, VAT, and payable entries reverse in full.
- Given a refund, When airline penalty and agency fee are entered, Then the customer credit note and net refund payable are computed and posted.
- Given a reissue, When processed, Then the old and new tickets are linked and only the fare difference and fees post.

MB-305 — ADM / ACM memos

As an accountant, I want to record airline debit and credit memos that adjust supplier payables with a reason code, so that airline-side corrections are traceable instead of ad-hoc journal entries.

Points: 3 **Value:** 3 (provisional) **V÷E:** 1.00 **MoSCoW:** Should **Day:** 4 **Depends on:** MB-303

Definition of Ready:

- Dependencies completed: MB-303.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given an ADM, When recorded against a supplier, Then the payable increases and the memo links to the affected ticket(s).
- Given an ACM, When recorded, Then the payable decreases with the same traceability.

Definition of Done — E3 (Flight Ticketing):

- A full ticket lifecycle (issue → partial refund → reissue) reconciles to the poisha in the ledger on staging.
- PNR and ticket-number search return the right booking in the UI.
- Every ticketed test line raised the correct supplier payable; the negative-margin warning fires in e2e.
- Shared engineering baseline (§ 10.3) green for every story in the epic.

E4 — Hotel Bookings (3 stories, 9 pts)

Epic goal: Hotel sales carry stay metadata and support both markup and commission economics.

MB-401 — Hotel line metadata

As a counter agent, I want to record property, confirmation number, check-in/out, rooms, and board basis on hotel lines, so that hotel bookings are complete and disputes are resolvable.

Points: 3 **Value:** 4 (provisional) **V÷E:** 1.33 **MoSCoW:** Must **Day:** 5 **Depends on:** MB-103

Definition of Ready:

- Dependencies completed: MB-103.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a hotel line, When check-in and check-out are entered, Then nights are auto-calculated.
- Given a confirmation number, When searched, Then the booking is found.

MB-402 — Markup vs. commission pricing

As an accountant, I want to price each hotel booking either cost-plus-markup or gross-with-commission, so that both supplier deal types are accounted correctly.

Points: 3 **Value:** 4 (provisional) **V÷E:** 1.33 **MoSCoW:** Must **Day:** 5 **Depends on:** MB-401, MB-303

Definition of Ready:

- Dependencies completed: MB-401, MB-303.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given markup mode, When saved, Then revenue is the selling price and cost raises a payable.
- Given commission mode, When saved, Then only the commission recognizes as income and the pass-through does not inflate revenue.

MB-403 — Hotel cancellation penalties

As a counter agent, I want to apply hotel cancellation policies with penalty windows when cancelling a stay, so that penalty charges are consistent and documented.

Points: 3 **Value:** 3 (provisional) **V÷E:** 1.00 **MoSCoW:** Should **Day:** 5 **Depends on:** MB-401, MB-205

Definition of Ready:

- Dependencies completed: MB-401, MB-205.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a stay inside its penalty window, When cancelled, Then the penalty computes from the stored policy and posts like MB-205.

Definition of Done — E4 (Hotel Bookings):

- One markup-mode and one commission-mode test booking each post correctly and appear correctly in profitability data.
- Night auto-calculation and penalty-window cancellation verified in e2e.
- Shared engineering baseline (§ 10.3) green for every story in the epic.

E5 — Tour Packages (5 stories, 21 pts)

Epic goal: Packages bundle costs into one price, take installments, and produce departure manifests.

MB-501 — Package builder

As a counter agent, I want to bundle flights, hotels, transport, guides, and meals into one package with a single selling price, so that customers buy one product while we track every cost component.

Points: 5 **Value:** 5 (provisional) **V÷E:** 1.00 **MoSCoW:** Must **Day:** 5 **Depends on:** MB-103

Definition of Ready:

- Dependencies completed: MB-103.
- One real package composition provided by the agency as the reference case.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a package, When cost components are added, Then the customer document shows only the package line and price.
- Given a package sale, When posted, Then each component's cost posts to its own supplier/cost account.

MB-502 — Installment schedule

As a counter agent, I want to define deposit and installment due dates per package sale with reminders, so that collections for high-value packages are systematic.

Points: 5 **Value:** 4 (provisional) **V÷E:** 0.80 **MoSCoW:** Should **Day:** 5 **Depends on:** MB-501, MB-204

Definition of Ready:

- Dependencies completed: MB-501, MB-204.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a schedule, When an installment is received, Then it matches to the schedule and the remaining plan updates.
- Given an overdue installment, When the day rolls over, Then the booking is flagged and a reminder is queued.

MB-503 — Departure manifest

As a counter agent, I want to export the passenger manifest for a departure with passport details, so that airlines, hotels, and guides get accurate lists.

Points: 3 **Value:** 4 (provisional) **V÷E:** 1.33 **MoSCoW:** Should **Day:** 5 **Depends on:** MB-101, MB-501

Definition of Ready:

- Dependencies completed: MB-101, MB-501.

- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a departure date, When the manifest is exported, Then it lists all passengers with passport data, masked for roles without PII permission (MB-1003).

MB-504 — Group bookings

As a counter agent, I want to invoice one payer for many passengers with per-passenger pricing tiers, so that school, corporate, and family groups are one document, not twenty.

Points: 5 **Value:** 3 (provisional) **V÷E:** 0.60 **MoSCoW:** Could **Day:** 5 **Depends on:** MB-501

Definition of Ready:

- Dependencies completed: MB-501.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a group of passengers with tiered prices, When invoiced, Then one invoice carries per-passenger lines and one total.

MB-505 — Package profitability view

As an agency owner, I want to see actual costs vs. revenue per package instance, so that we learn which packages make money.

Points: 3 **Value:** 4 (provisional) **V÷E:** 1.33 **MoSCoW:** Should **Day:** 5 **Depends on:** MB-501, MB-303

Definition of Ready:

- Dependencies completed: MB-501, MB-303.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a completed package, When its profitability view opens, Then revenue, component costs, and margin are shown and reconcile to the ledger.

Definition of Done — E5 (Tour Packages):

- The reference package (from MB-501's DoR) sells end-to-end: components hidden on customer documents, each cost posted to its account.
- An installment plan updates correctly on partial receipt; an overdue installment flags.
- Manifest export verified masked and unmasked per role.
- Shared engineering baseline (§ 10.3) green for every story in the epic.

E6 — Transport & Amenities (3 stories, 7 pts)

Epic goal: Transport, visa processing, and insurance are sellable, trackable services.

MB-601 — Transport service lines

As a counter agent, I want to sell transport (route, vehicle type, date) as invoice lines, so that airport transfers and rentals are in the same system as everything else.

Points: 2 **Value:** 3 (provisional) **V÷E:** 1.50 **MoSCoW:** Must **Day:** 6 **Depends on:** MB-103

Definition of Ready:

- Dependencies completed: MB-103.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a transport line, When saved with route, vehicle, and date, Then it appears on the booking and documents.

MB-602 — Visa processing service

As a counter agent, I want to sell visa processing with a per-application document checklist and status, so that no application stalls because a document was silently missing.

Points: 3 **Value:** 3 (provisional) **V÷E:** 1.00 **MoSCoW:** Should **Day:** 6 **Depends on:** MB-103, MB-101

Definition of Ready:

- Dependencies completed: MB-103, MB-101.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a visa service sale, When documents are checked off, Then the application status reflects completeness.
- Given a missing document, When the list is viewed, Then it is explicit what is pending and from whom.

MB-603 — Travel insurance sales

As a counter agent, I want to sell insurance policies recording policy number, insurer, and our commission, so that ancillary income is captured and reconcilable with the insurer.

Points: 2 **Value:** 3 (provisional) **V÷E:** 1.50 **MoSCoW:** Should **Day:** 6 **Depends on:** MB-103, MB-102

Definition of Ready:

- Dependencies completed: MB-103, MB-102.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given an insurance sale, When saved, Then policy number and insurer (supplier) are recorded and commission income posts.

Definition of Done — E6 (Transport & Amenities):

- Each amenity type sold end-to-end on a single test invoice with correct income posting.
- A visa application's checklist status reflects its document state through at least one full cycle.
- Shared engineering baseline (§ 10.3) green for every story in the epic.

E7 — Supplier Accounting & Reconciliation (4 stories, 18 pts)

Epic goal: Payables mirror bookings automatically; supplier statements reconcile; customer advances sit as liabilities until earned.

MB-701 — Auto supplier bills from bookings

As an accountant, I want to have booking cost lines aggregate automatically into supplier bills, so that payables are complete without manual bill entry.

Points: 3 **Value:** 5 (provisional) **V÷E:** 1.67 **MoSCoW:** Must **Day:** 4 **Depends on:** MB-303

Definition of Ready:

- Dependencies completed: MB-303.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given ticketed/vouchered cost lines for a supplier, When the billing job runs (or on demand), Then one bill per supplier/period contains them all, unduplicated.

MB-702 — Supplier statement import & reconciliation

As an accountant, I want to import a consolidator/BSP-style CSV statement and reconcile it against recorded tickets, so that we pay suppliers exactly what the tickets justify.

Points: 8 **Value:** 4 (provisional) **V÷E:** 0.50 **MoSCoW:** Must **Day:** 6 **Depends on:** MB-701

Verify / flag: Statement column layout — open question: obtain a sample file from the consolidator; SPLIT candidate if format proves exotic.

Definition of Ready:

- Dependencies completed: MB-701.
- Phase 0 verification closed (see “Verify / flag” above).
- Sample consolidator/BSP-style statement file received (OQ-3) — hard gate; story cannot start without it.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a statement CSV, When imported, Then rows match to tickets by ticket number and matched/unmatched are listed.
- Given discrepancies (price or missing ticket), When reconciliation completes, Then a discrepancy report is produced and nothing posts silently.

MB-703 — Supplier aging & statements

As an accountant, I want to see payables aging per supplier and produce supplier statements, so that we prioritize payments and answer supplier queries instantly.

Points: 2 **Value:** 4 (provisional) **V÷E:** 2.00 **MoSCoW:** Must **Day:** 6 **Depends on:** MB-701

Verify / flag: Existing A/P aging report coverage — verify in codebase (Phase 0).

Definition of Ready:

- Dependencies completed: MB-701.
- Phase 0 verification closed (see “Verify / flag” above).
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given open bills, When the aging report runs, Then balances bucket by age per supplier.

MB-704 — Client advances as unearned-revenue liability

As an accountant, I want to hold customer advances as a liability and recognize revenue at ticketing/voucher issue, so that revenue is never overstated before the service is committed.

Points: 5 **Value:** 4 (provisional) **V÷E:** 0.80 **MoSCoW:** Must **Day:** 6 **Depends on:** MB-204, MB-303

Verify / flag: Recognition trigger policy (ticketing vs. travel date) — confirm with the agency's accountant.

Definition of Ready:

- Dependencies completed: MB-204, MB-303.
- Phase 0 verification closed (see “Verify / flag” above).
- Revenue-recognition trigger decided with the accountant (OQ-4) — hard gate.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given an advance receipt, When posted, Then it sits in the client-advance liability account.
- Given the recognition trigger fires for a booking, When posted, Then the advance moves from liability to revenue for exactly the earned amount.

Definition of Done — E7 (Supplier Accounting & Reconciliation):

- Statement import round-trips the sample file: matches, mismatches, and the discrepancy report all verified.
- Auto-bill generation proven idempotent (re-run creates no duplicates).
- One advance-to-revenue recognition journal reviewed and approved by the accountant on staging.
- Shared engineering baseline (§ 10.3) green for every story in the epic.

E8 — Reporting (5 stories, 14 pts)

Epic goal: The owner and accountant see product-line performance, per-booking profit, VAT position, and receivables at a glance.

MB-801 — Sales by product line

As an agency owner, I want to see sales split across flights, hotels, packages, transport, and amenities for any period, so that we know which lines carry the business.

Points: 3 **Value:** 5 (provisional) **V÷E:** 1.67 **MoSCoW:** Must **Day:** 6 **Depends on:** MB-103

Definition of Ready:

- Dependencies completed: MB-103.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a period, When the report runs, Then revenue per product line reconciles to the income accounts from MB-103.

MB-802 — Per-booking profitability

As an agency owner, I want to see revenue, cost, and margin per booking, so that unprofitable deals are visible while we can still fix pricing.

Points: 3 **Value:** 5 (provisional) **V÷E:** 1.67 **MoSCoW:** Must **Day:** 6 **Depends on:** MB-303, MB-402, MB-501

Definition of Ready:

- Dependencies completed: MB-303, MB-402, MB-501.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a booking, When the report runs, Then its revenue, direct costs, and margin display and total to ledger figures.

MB-803 — Agent performance report

As an agency owner, I want to see bookings, revenue, and collections per counter agent, so that performance conversations run on data.

Points: 2 **Value:** 3 (provisional) **V÷E:** 1.50 **MoSCoW:** Should **Day:** 6 **Depends on:** MB-203

Definition of Ready:

- Dependencies completed: MB-203.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a period, When the report runs, Then per-agent bookings, revenue, and receipts are listed.

MB-804 — VAT summary export

As an accountant, I want to export a VAT summary covering output VAT per rate and period, so that monthly NBR filing preparation takes minutes, not days.

Points: 5 **Value:** 4 (provisional) **V÷E:** 0.80 **MoSCoW:** Must **Day:** 6 **Depends on:** MB-006

Verify / flag: Exact NBR/Mushak form layout — open question for the agency's accountant; ship a generic summary first.

Definition of Ready:

- Dependencies completed: MB-006.
- Phase 0 verification closed (see “Verify / flag” above).
- Filing format confirmed with the accountant, or generic-first layout explicitly agreed (OQ-2).
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given a filing period, When exported, Then output VAT totals per rate reconcile to the VAT payable account.
- Given the accountant confirms the filing format, When the layout is configured, Then the export matches it.

MB-805 — Receivables aging exposure

As an accountant, I want to use A/R aging over travel bookings and corporate clients, so that collections are chased before travel dates pass.

Points: 1 **Value:** 4 (provisional) **V÷E:** 4.00 **MoSCoW:** Must **Day:** 6 **Depends on:** MB-104

Verify / flag: Existing A/R aging report — verify it covers our fields in codebase (Phase 0).

Definition of Ready:

- Dependencies completed: MB-104.
- Phase 0 verification closed (see “Verify / flag” above).
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given open invoices, When aging runs, Then balances bucket by age and can filter by corporate client.

Definition of Done — E8 (Reporting):

- Every report reconciles to ledger totals on the seeded staging dataset.
- VAT export totals equal the VAT payable account balance for the test period.
- All reports permission-gated per the MB-1001 matrix.
- Shared engineering baseline (§ 10.3) green for every story in the epic.

E9 — Integration Stubs (Future GDS / Gateways) (4 stories, 8 pts)

Epic goal: Typed adapter seams exist so live GDS/NDC/payment integrations plug in later without re-architecture. No live external calls this week.

MB-901 — BookingSupplierAdapter interface

As an admin, I want to have a typed adapter interface (search / price / book / ticket / cancel) with DTOs for flight and hotel suppliers, so that future GDS/NDC integrations are a plug-in, not a rewrite.

Points: 3 **Value:** 3 (provisional) **V÷E:** 1.00 **MoSCoW:** Must **Day:** 7 **Depends on:** MB-203

Definition of Ready:

- Dependencies completed: MB-203.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given the interface, When a manual-entry “adapter” implements it, Then today's manual flow runs through the same seam a live adapter would.
- Given the DTOs, When reviewed, Then they cover the metadata fields used by MB-301 and MB-401.

MB-902 — Mock adapter + fixtures

As an admin, I want to have a mock adapter with fixture data driving automated tests, so that the seam stays honest because tests exercise it.

Points: 2 **Value:** 3 (provisional) **V÷E:** 1.50 **MoSCoW:** Should **Day:** 7 **Depends on:** MB-901

Definition of Ready:

- Dependencies completed: MB-901.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given the e2e suite, When it runs, Then booking flows execute against the mock adapter with deterministic fixtures.

MB-903 — PaymentGatewayAdapter interface

As an admin, I want to have a typed payment-gateway adapter interface (future bKash/SSLCommerz targets), so that local gateway integration later will not disturb receipt accounting.

Points: 2 **Value:** 3 (provisional) **V÷E:** 1.50 **MoSCoW:** Should **Day:** 7 **Depends on:** MB-204

Definition of Ready:

- Dependencies completed: MB-204.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given the interface, When a manual receipt is recorded, Then it flows through the same seam a gateway callback would.

MB-904 — Integration feature flags

As an admin, I want to gate all future live integrations behind configuration flags, so that we can ship the seams dark and enable per-integration later.

Points: 1 **Value:** 2 (provisional) **V÷E:** 2.00 **MoSCoW:** Could **Day:** 7 **Depends on:** MB-901, MB-903

Definition of Ready:

- Dependencies completed: MB-901, MB-903.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given flags default off, When the app runs, Then no external integration code path is reachable.

Definition of Done — E9 (Integration Stubs (Future GDS / Gateways)):

- Manual booking and receipt flows demonstrably execute through the adapter seams (mock-adapter e2e green).
- DTO review confirms coverage of every metadata field used by MB-301 and MB-401.
- All integration flags verified off in the production configuration.
- Shared engineering baseline (§ 10.3) green for every story in the epic.

E10 — Access, Audit & Data Protection (4 stories, 13 pts)

Epic goal: Roles gate what people see, passport data is encrypted and masked, changes are auditable, and backups restore.

MB-1001 — Role permission matrix

As an admin, I want to map owner, admin, counter agent, and accountant roles to explicit permissions, so that staff see and do exactly what their job requires.

Points: 3 **Value:** 5 (provisional) **V÷E:** 1.67 **MoSCoW:** Must **Day:** 2 **Depends on:** —

Verify / flag: Existing RBAC capabilities — verify in codebase (Phase 0). Scheduled Day 2 alongside E1 so permissions exist before travel data entry.

Definition of Ready:

- No blocking dependencies.
- Phase 0 verification closed (see “Verify / flag” above).
- Permission matrix draft signed off by the agency owner.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given the matrix, When a counter agent logs in, Then supplier costs and margins are hidden unless granted.
- Given an accountant, When working, Then they post accounting entries but cannot alter bookings' travel details.

MB-1002 — Audit log for critical mutations

As an agency owner, I want to see who changed bookings, invoices, refunds, and settings, and when, so that disputes and errors are traceable to their source.

Points: 3 **Value:** 4 (provisional) **V÷E:** 1.33 **MoSCoW:** Should **Day:** 7 **Depends on:** MB-203

Verify / flag: Existing audit/activity log — verify in codebase (Phase 0).

Definition of Ready:

- Dependencies completed: MB-203.
- Phase 0 verification closed (see “Verify / flag” above).
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given any status change, refund, or void, When it happens, Then actor, timestamp, and before/after values are logged immutably.

MB-1003 — Passport PII encryption & masking

As an admin, I want to encrypt passport/identity fields at rest and mask them for unauthorized roles, so that a data leak does not become a passport leak.

Points: 5 **Value:** 4 (provisional) **V÷E:** 0.80 **MoSCoW:** Must **Day:** 2 **Depends on:** —

Verify / flag: Scheduled Day 2, before bulk passenger entry begins.

Definition of Ready:

- No blocking dependencies.
- Phase 0 verification closed (see “Verify / flag” above).
- Encryption key-management approach chosen (env-based vs. managed KMS).
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given passport fields, When stored, Then they are encrypted at rest.
- Given a role without PII permission, When viewing or exporting, Then passport numbers render masked.

MB-1004 — Backup & restore runbook

As an admin, I want to have scripted database backups and a tested restore procedure, so that a bad day is an hour's recovery, not a business-ending event.

Points: 2 **Value:** 4 (provisional) **V÷E:** 2.00 **MoSCoW:** Should **Day:** 7 **Depends on:** —

Definition of Ready:

- No blocking dependencies.
- Framework gates (gist § 1.6) — story form, ≤ 8 pts, AC drafted: satisfied at authoring (lint-checked).

Acceptance criteria:

- Given the nightly backup script, When run, Then an encrypted backup lands off-host.

- Given the runbook, When a restore drill is executed, Then the system returns to a consistent state and the drill is documented.

Definition of Done — E10 (Access, Audit & Data Protection):

- Server-side permission enforcement tested per role (not just UI hiding).
- PII masking verified in UI and in every export path.
- Audit entries confirmed immutable; one restore drill executed and documented.
- Shared engineering baseline (§ 10.3) green for every story in the epic.

7. Phase 0 Spikes (Day 1) — Clearing the Development Path

Six timeboxed spikes run first thing Day 1, before (and alongside) E0 build work. Each answers a question the plan depends on; each closes “Phase 0 verification” gates in story DoRs (§ 6). Per the framework's risk-register hook (gist § 3), spikes and the two 8-point stories are the primary inputs to the risk register (§ 12). Spikes are timeboxed, not pointed — their output is a decision or a map, not shippable code.

ID	Spike	Question to answer	Timebox	Unblocks	Exit deliverable
SP-01	Architecture & extension points	Where do travel modules attach? Is overlay/module isolation feasible, or is a deeper fork required? How is theming/config done?	3h	MB-001, MB-103, MB-203	Module attachment plan + fork-vs-overlay decision note (feeds A1, RR-03, RR-04).
SP-02	Posting engine & account seeding	How do documents post to the ledger? How are accounts seeded/mapped? How do credit notes and multi-currency behave?	3h	MB-007, MB-303, MB-704	Posting map for every travel transaction type, incl. refunds and advances.
SP-03	RBAC & audit capabilities	What roles/permissions exist? Where can field-level masking hook in? What audit/activity logging is built in?	2h	MB-1001, MB-1003	Capability matrix + masking hook points (feeds MB-1002 scoping).
SP-04	Document pipeline (PDF / email)	How are invoice/quote/receipt PDFs and emails templated? What is the override mechanism?	2h	MB-002	Template override recipe (feeds MB-003).
SP-05	Quote → invoice lifecycle reuse	How much of estimates → invoice → payment flows can be reused vs. built for bookings, deposits, and conversions?	2h	MB-201, MB-202, MB-204	Reuse-vs-build decision per lifecycle step.
SP-06	License & trademark brief	What exactly do the repo's LICENSE and DISCLAIMER files require for white-labeling and network serving?	1h	MB-004	Counsel briefing note (OQ-5).

If any spike's timebox expires without an answer, that is itself the answer: the affected stories are not Ready, and the § 10.1 escalation rule applies to their day's plan.

8. Dependency Graph (Must-Have Path)

The graph below shows the full Must-have development path: the six Phase 0 spikes (amber hexagons, dashed arrows = “unblocks”) and all 33 Must stories clustered by epic (solid arrows = “depends on”, pointing from prerequisite to dependent). Should/Could stories are omitted for readability; their dependencies are on each story in § 6. Stories with no story-level prerequisites (MB-001, MB-004, MB-005, MB-007, MB-102, MB-805, MB-1001, MB-1003 — tool-computed) can start in parallel the moment their spike, if any, closes — this parallelism is what the multi-agent plan in § 10 exploits.

The figure is placed on the following landscape page for readability. Critical path reading (synthesis): SP-01/SP-02 → E0 accounts & catalog (MB-007 → MB-103) → booking core (MB-203 → MB-202 → MB-204) → flights (MB-301 → MB-302/MB-303 → MB-304) → supplier accounting (MB-701 → MB-702) and reporting (MB-802). Anything not on this spine can shift days without moving go-live.

TravelBooks — Must-Have Dependency Graph (spikes + stories)

Figure 1 — Phase 0 spikes and all Must-have stories, clustered by epic; dashed = spike unblocks, solid = story dependency. The graph is defined in Mermaid (source: Appendix A; renders natively on GitHub or mermaid.live); this image is rendered from that graph definition with Graphviz, as this build environment cannot run Mermaid's browser-based renderer. Full-resolution image delivered as depgraph.png.

9. Non-Functional Requirements

- NFR-1 Security/PII: passport and identity fields encrypted at rest and role-masked (MB-1003); TLS in transit; role matrix enforced server-side (MB-1001).
- NFR-2 Auditability: every financial mutation and booking status change attributable to a user with timestamp (MB-1002); ledger immutability inherited from double-entry core.
- NFR-3 Reliability: nightly encrypted off-host backups with a tested restore (MB-1004); target restore time ≤ 1 hour.
- NFR-4 Performance: counter operations (quote, invoice, receipt) interactive at agency scale (thousands of bookings/year); no report over a year of data should exceed tens of seconds — baseline to be measured Day 7, not asserted.
- NFR-5 Maintainability: travel features isolated into modules/overlays to the extent Phase 0 finds feasible; upstream merges must remain practical; all new code TypeScript, matching the repo's stack.
- NFR-6 Compliance: AGPL source availability (MB-004); trademark cleanup per LICENSE/DISCLAIMER review; VAT correctness (MB-006, MB-804).

10. One-Week Delivery Plan (AI Coding Agents)

10.1 Approach

Sprint-velocity forecasting (gist § 2) collapses to a daily loop: Day 1 is the calibration slice (cold-start logic, gist § 2.2) — its completed points are the first real throughput datum for AI-agent capacity. Each morning: re-forecast the remaining days from actual completed points; each evening: burn-up checkpoint. Should/Could stories are the scope-flex valve (gist § 2.3); Musts flex only by day, never out of the week without an explicit stakeholder call. Escalation rule: if Day-1 actuals land under ~60% of the Day-1 plan, split MB-304 and MB-702 immediately (the two 8-pointers) and re-bucket Could's to Won't.

10.2 Day-by-day allocation

Day	Scope	Load
Day 1 — Tue 2026-07-07	Phase 0 spikes SP-01...SP-06 (§ 7) + E0 complete	7 stories / 15 pts + 13h spike timeboxes (parallel)
Day 2 — Wed 2026-07-08	E1 master data + MB-1001 (roles) + MB-1003 (PII) — permissions and encryption land before bulk data entry	6 stories / 21 pts
Day 3 — Thu 2026-07-09	E2 booking lifecycle end-to-end	6 stories / 23 pts
Day 4 — Fri 2026-07-10	E3 flight ticketing + MB-701 (auto supplier bills)	6 stories / 25 pts
Day 5 — Sat 2026-07-11	E4 hotels + E5 tour packages	8 stories / 30 pts
Day 6 — Sun 2026-07-12	E6 amenities + E7 reconciliation & advances + E8 reporting (heaviest day — first to flex)	11 stories / 36 pts
Day 7 — Mon 2026-07-13	E9 stubs + MB-1002/MB-1004 + hardening: full e2e run, UAT with the agency, deploy	6 stories / 13 pts + hardening

Total: 50 stories, 163 points across 7 days (tool-computed). Loads are intentionally uneven; parallel agents absorb peaks, and § 10.1's flex rule absorbs misses.

10.3 Shared engineering baseline (extended by per-story DoR and per-epic DoD in § 6)

- Ready — the framework gates every story's Definition of Ready includes (gist § 1.6): story form, ≤ 8 pts, AC drafted, dependencies unblocked, Phase 0 verification closed. Story-specific readiness items are listed on each story in § 6.
- Done — the baseline every epic's Definition of Done extends: all story acceptance criteria pass; unit + e2e (Playwright, per repo tooling) green; migrations reversible; human review of agent output; docs updated; deployed to staging. Epic-specific completion criteria close each epic in § 6.

11. Won't-Have This Week

- Live GDS/NDC integrations (Amadeus/Sabre/Travelport) — seams shipped instead (E9).
- Live payment gateways (bKash, SSLCommerz) — seam shipped (MB-903).
- Multi-tenant SaaS operation; customer self-service portal; mobile apps; Bangla UI localization; automated airline penalty rule engines.

12. Risk Register

Per the framework's governance hook (gist § 3), every spike and every near-SPLIT story feeds this register, and each entry carries trigger, early-warning signal, mitigation, and contingency. Probability/impact ratings are the author's labeled judgments for PO review, not measurements.

RR-01 — One-week timeline is the plan's core bet (Probability: Medium · Impact: High)

- Trigger: Day-1 burn-up lands under ~60% of the Day-1 plan.
- Early warning: Spike timeboxes overrun on Day-1 morning; agent PRs repeatedly failing human review.
- Mitigation: § 10.1 escalation: split the 8-pointers, re-bucket Could's to Won't, flex Should's; re-sequence Must's before any scope cut.
- Contingency: Go live Must's-only on Day 7; carry Should's/Could's into a second week.
- Linked items: All epics; § 10; RR-02

RR-02 — Hidden complexity in the two 8-point stories (Probability: Medium · Impact: Medium)

- Trigger: Estimator divergence over one step, or AC churn once implementation starts.
- Early warning: MB-304/MB-702 branch counts and edge-case lists growing during Day 3–4 refinement.
- Mitigation: Pre-agreed split lines: void / refund / reissue (MB-304); import / matching / discrepancy report (MB-702).
- Contingency: Ship refund-only path (voids and reissues manual); ship import + report only, reconcile manually.
- Linked items: MB-304, MB-702, SP-02

RR-03 — Expected extension points don't exist (Probability: Medium · Impact: High)

- Trigger: SP-01 finds no clean seam for travel modules or theming.
- Early warning: Phase 0 reveals branding/config hardcoded deep in upstream code.

- Mitigation: SP-01 runs first on Day 1 so the architecture decision is made before any epic build starts.
- Contingency: Accept a deeper fork; document every touched upstream file to keep future merges tractable (feeds RR-04).
- Linked items: SP-01, MB-001, MB-103, A1

RR-04 — Fork drift against upstream BigCapital (Probability: High · Impact: Medium)

- Trigger: Next upstream release (v0.25.x line as of 2026-03-28) produces painful merge conflicts.
- Early warning: Diffs accumulating in core ledger files rather than overlay modules.
- Mitigation: Module/overlay isolation per A1; never edit ledger core where avoidable; touchpoint log from Phase 0.
- Contingency: Pin the upstream version; schedule a dedicated quarterly merge window.
- Linked items: SP-01, NFR-5, A1

RR-05 — AGPL / trademark compliance misstep (Probability: Low · Impact: High)

- Trigger: Counsel flags a source-offer or branding gap at review.
- Early warning: OQ-5 still unanswered by Day 5.
- Mitigation: SP-06 briefing note filed Day 1; MB-004 ships regardless of counsel timing.
- Contingency: Hold public launch until sign-off; operate internally in the meantime.
- Linked items: SP-06, MB-004, OQ-5

RR-06 — VAT filing format mismatch (Probability: Medium · Impact: Medium)

- Trigger: Accountant rejects the export layout at first monthly filing.
- Early warning: OQ-2 still unanswered by Day 3.
- Mitigation: MB-804 ships a generic, reconcilable summary first; layout kept configurable.
- Contingency: Prepare first filing manually from ledger export while the layout is corrected.
- Linked items: MB-804, MB-006, OQ-2

RR-07 — Consolidator statement format unknown (Probability: Medium · Impact: Medium)

- Trigger: Sample file not received by Day 3 — MB-702's DoR hard gate fails.
- Early warning: Consolidator unresponsive by end of Day 2.
- Mitigation: Chase the sample on Day 1; build MB-702 against a CSV mapping layer so only the mapping changes.
- Contingency: Build and test against a synthetic fixture; finalize mapping after the week.
- Linked items: MB-702, OQ-3, RR-02

RR-08 — Passport PII exposure (Probability: Low · Impact: High)

- Trigger: Any unmasked render or export reaches an unauthorized role.
- Early warning: Masking test failures; ad-hoc export paths appearing in review.
- Mitigation: MB-1003 lands Day 2, before bulk passenger entry; masking asserted in e2e for UI and every export.

- Contingency: Rotate keys, purge affected exports, run an incident review before resuming data entry.
- Linked items: MB-1003, MB-1001, NFR-1, E10 DoD

RR-09 — Human review becomes the bottleneck for agent output (Probability: Medium · Impact: Medium)

- Trigger: PR queue older than one day.
- Early warning: Review backlog growing by end of Day 2.
- Mitigation: Story-sized PRs only; Must PRs reviewed first; fixed morning/evening review sessions.
- Contingency: Freeze new story starts and burn down the queue before the heavy Day-6 load.
- Linked items: A6, § 10, RR-01

13. Open Questions

- OQ-1: PO to confirm all provisional Value scores (§ 5.1).
- OQ-2: Exact NBR VAT filing format — agency accountant (MB-804, MB-006).
- OQ-3: Sample consolidator/BSP-style statement file — needed by Day 3 (MB-702).
- OQ-4: Revenue-recognition trigger for advances: at ticketing/voucher or at travel date — accountant (MB-704).
- OQ-5: Counsel confirmation of AGPL source-offer wording and trademark cleanup scope (MB-004, A2).
- OQ-6: Does the agency need Bangla UI in a fast-follow? (out of scope this week).

14. Traceability Totals (tool-computed)

14.1 Per epic

Epic	Name	Stories	Points
E0	Foundation & White-Label	7	15
E1	Travel Master Data	4	13
E2	Booking Lifecycle	6	23
E3	Flight Ticketing	5	22
E4	Hotel Bookings	3	9
E5	Tour Packages	5	21
E6	Transport & Amenities	3	7
E7	Supplier Accounting & Reconciliation	4	18
E8	Reporting	5	14
E9	Integration Stubs (Future GDS / Gateways)	4	8
E10	Access, Audit & Data Protection	4	13
—	TOTAL	50	163

14.2 Per MoSCoW bucket

Bucket	Stories	Points
Must	33	117
Should	15	40
Could	2	6
Won't (this week)	— (listed in § 11, not sized)	—

14.3 Full story index

ID	Title	Pts	Val	V+E	MoSCoW	Day
MB-001	Brand configuration	3	5	1.67	Must	1
MB-002	Branded customer documents (invoice / quote / receipt PDFs)	3	5	1.67	Must	1
MB-003	Branded transactional emails	2	4	2.00	Should	1

15. Glossary

Term	Meaning (working definitions for this document)
PNR	Passenger Name Record — the airline/GDS booking reference.
ADM / ACM	Agency Debit / Credit Memo — airline-issued corrections to what an agency owes or is owed.
BSP	IATA's Billing and Settlement Plan — consolidated airline–agency settlement; this agency settles via a consolidator, so “BSP-style” here means the consolidator's periodic statement.
Consolidator	A wholesaler with ticketing authority through which sub-agents issue tickets.
GDS / NDC	Global Distribution System (Amadeus/Sabre/Travelport) / IATA's New Distribution Capability — future integration targets, out of scope this week.
Markup vs. commission	Two pricing models: sell above cost and keep the difference, vs. sell at gross and earn a supplier-paid commission.
Client advance	Customer money received before the service is committed — a liability until recognized (MB-704).
Mushak	NBR VAT form family in Bangladesh — exact applicable forms: OQ-2, accountant to confirm.

Appendix A — Dependency Graph Source (Mermaid)

Canonical Mermaid definition of Figure 1 (also delivered as depgraph.mmd). Paste into mermaid.live, or commit to the repo — GitHub renders it natively in markdown. Regenerate after any change to story dependencies.
